

Andrea Destro Reports Berardi's Strategies

According to **Andrea Destro** of **Berardi** of Italy, one of Berardi's main strategies is the development of integrated logistics services. One of these strategies is Kanban, the goal of which is to let clients save the time and costs of managing components. Kanban and Kanban Up are inte-

grated logistics services conceived to sustain our partner companies

with constant and measured supplies of fasteners, fittings, clamps and more. We are able to follow demand fluctuations very closely, ensuring stable supplies that use less warehouse space and offering professional logistics support all along.

These are relatively low-price products, but their management is expensive, as the purchasing and logistics departments spend a lot of time procuring the materials. When asked, "How is it done?" Destro responds that Berardi solves this problem by designing services based on the exact production needs of our clients. We offer a customized solution for every client, tailor-made on their peculiarities and changing needs. And our specialized logistics solutions now include Easy Self 24, a sort of automatic vending machine for parts and equipment. This has the advantage of reducing consumption, as operators are directly responsible for it, and purchases are automatized and traced. Easy Self 24™ is a smart machine that gives its users all the necessary information in order to waste as little time as possible on the management of these products.

Destro continues, we draw from the experience of our over 400 logistics installations, which allows us to immediately understand the

key points and produce personalized projects.

Through close monitoring by the Berardi logistics team, services are kept up to date along with the seasonal changes in production requirements.

Traceability of single movements is possible for a single container/compartment/line/desk/operator—Traceability of batches—

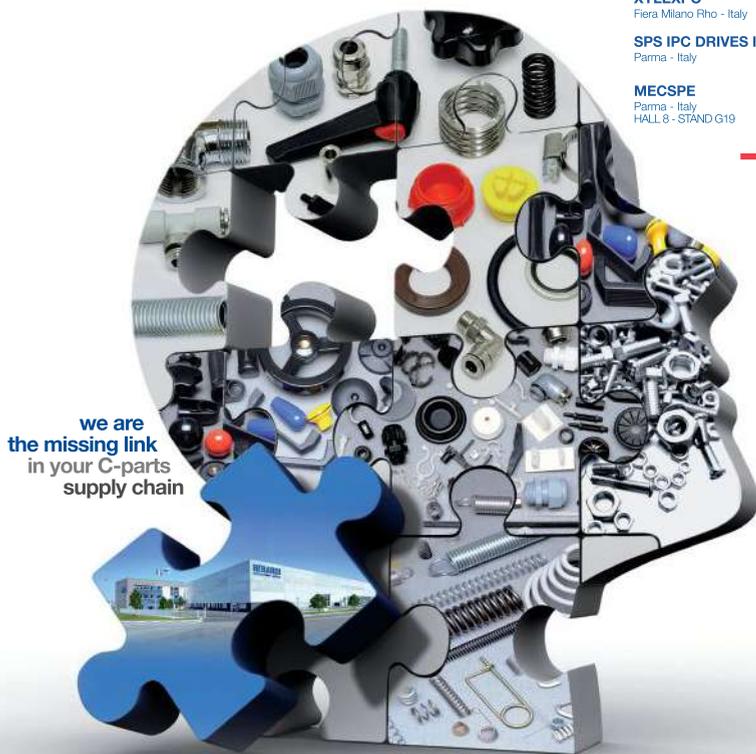

Constant updating of information on Kanban tags—Real-time and remote modifications on the Kanban tags.

The EasySelf 24 automated vending machine technology allows its user to manage materials in minimal space.

Safe and highly customizable, the EasySelf 24 has containers with doors, in different sizes to allow

for materials of various sizes. www.gberardi.com

Many solutions, one supplier.

As supply chains undergo full digital transformation, Berardi's new logistics services reduce handling costs, with a lean approach to help optimize the whole production process. With Berardi's logistics support, clients save themselves the fuss of managing C-parts.

Along with the traditional stock of steel fasteners, Berardi's warehouse stores a wide and deep range of other components for various industries. These include springs, tube clamps, magnets, operating parts, vibration dampers, lifting hooks and devices, hydraulic and pneumatic fittings, and personal protective devices, among others. Berardi has recently widened the assortment with plastic and metallic industrial components like cable glands and grommets, cabling supports, closures, clips, rivets, and spacers.
